## Landing Page

This project requires you to build a multi-section landing page, with a dynamically updating navigational menu based on the amount of content that is added to the page.

Project Files

You can obtain the project code here. To complete the project will mostly require modifying the `js/app.js` file, as well as modifications to the `index.html` and `css/styles.css` files to further update and customize your project.

Rubric

Your project will be evaluated by a Udacity code reviewer according to the Landing Page project rubric. Please make sure to re-review the rubric for detailed project requirements prior to submission.

Submission

Once you've met all of the rubric requirements, you can submit your project as either a zip file or a Github repository link below.
